THERMAL CAMERA TECHNOLOGY

+ Thermal camera technology provides increased protection for businesses by monitoring the body temperature of employees and the public. This helps stop the spread of COVID-19, as well as other viruses that cause a fever.

+ Allows for efficient, non-invasive screening of up to 5,000 people per hour, saving labor and keeping employees safe.

+ Accurately identifies people with elevated body temperatures with an alarm, so they can receive additional screening via handheld thermometer.

+ Utilizes facial recognition that targets the human forehead, allowing for accurate readings of individuals wearing masks, helmets, hats, etc.

Imagenet of the Treasure Coast is now offering thermal temperature solutions for both low-volume and high-volume applications:

+ **Low-Volume:** Ideal for businesses such as restaurants, small office buildings, retail stores, and dental and medical practices that see low to moderate foot traffic throughout the day - *MSRP: $5,995 - leasing options are available.*

+ **High-Volume:** Ideal for locations requiring mass scanning of the public, such as large office buildings, hotels, schools, hospitals, and sporting and event venues with high foot traffic - *MSRP: $22,000 - leasing options are available.*

+ ImageNet Consulting of the Treasure Coast provides comprehensive support from our expert technicians to ensure proper installation and the most accurate readings possible.
